concepts'*
'Multivariate statistical modelling

based on generalized

March 12th, 2020 - Structured additive regression models are perhaps the most commonly used class of models in statistical applications. It includes among others generalised linear models, generalised additive models, smoothing spline models, state space models, semiparametric regression, spatial and spatio-temporal models, log Gaussian Cox processes, geostatistical and geosadditive models.

'gllvm Fast analysis of multivariate abundance data with

April 29th, 2020 - There has been rapid development in tools for multivariate analysis based on fully specified statistical models or joint models? One approach attracting a lot of attention is generalized linear latent variable models (GLLVMs). However, software for fitting these models is typically slow and not practical for large datasets. 'Multivariate statistical modelling based on generalized

April 21st, 2020 - Multivariate statistical modelling based on generalized linear models. Ludwig Fahrmeir. Statistical modelling aims at providing more flexible model based tools for data analysis.'
