respiration and
photosynthesis psle
science academic
May 18th, 2020 - why
did oxygen level
increase from point a
to b it is because from

10am to 6pm it is in the daytime in the presence of light water and carbon dioxide the plant photosynthesises to release oxygen although the plant also respire using oxygen the rate of

photosynthesis is much more than respiration hence amount of oxygen level increase from point a to point b''79
