'The co occurrence test for non monotonic inference

December 5th, 2019 - The co occurrence test for non monotonic inference $p \text{ ? } q$ holds if and only if q holds in all the p satisfying belief change outcomes that are reasonably plausible as compared to other p satisfying belief change outcomes It should be noted that this criterion does not exclude the existence of some belief change outcome in which $p \text{ amp } \neg q$

**holds"Logic of Belief Revision
Stanford Encyclopedia of
Philosophy**

December 22nd, 2019 - In the logic of belief revision belief change a belief state or database is represented by a set of sentences The major operations of change are those consisting in the introduction or removal of a belief representing sentence In both cases changes affecting other sentences may be needed for instance in order to retain consistency'
