'how ecologically
based pest
management works
June 3rd, 2020 -
biological control
is the use of
natural enemies
usually called
beneficial insects
or beneficials to
reduce prevent or
delay outbreaks of
insects nematodes
weeds or plant
diseases biological
control agents can
be introduced or
they can be
attracted to the
farming system
through ecosystem
design naturally
occurring
beneficials at
sufficient levels
can take a big
bite' 'organic pest
management

**sustainable
agriculture**

June 6th, 2020 -
while every farming
system is unique the
principles of
ecological pest
management apply
universally manage
insects on your farm
highlights
ecological
strategies that
improve your farm s
natural defenses and
encourage beneficial
insects to attack
your worst
pests'' **eric lee**

**m?der farming with
native beneficial
insects**

May 22nd, 2020 -
farming with native
beneficial insects
actually represents
a bit of a departure
for the pollinator
conservation program
because it s really
an effort on our
part to now look at
the concept of
conservation

biological control
which serves the
strategies around
which we manipulate
landscapes to bring
in predatory and
parasitoid insects
that prey upon crop
pests and reduce and
in some cases
eliminate the need
for insecticides it
s a form of natural
pest

control ' 'farming
