---

---

May 18th, 2020 - a measure space  $(X, \mathcal{A}, \mu)$  is called finite if  $\mu(X)$  is a finite real number rather than nonzero finite. Measures are analogous to probability measures in the sense that any finite measure  $\mu$  is proportional to the probability measure. A measure  $\mu$  is called  $\sigma$ -finite if  $X$  can be decomposed into a countable union of measurable sets of finite measure.
